1. Customer Segments

Introduction:

Example:

For Netflix, customer segments include individual entertainment subscribers and families looking for affordable on-demand movies and shows.

2. Value Propositions

Introduction:

This describes the unique value a company delivers to its customers — what makes the product or service attractive and why customers should choose it over competitors.

Example:

3. Channels

Introduction:

Channels are the ways a company communicates with and delivers its value proposition to its customer segments. These include distribution, sales, and communication channels.

Example:

4. Customer Relationships

Example:

Amazon maintains customer relationships through personalized recommendations, responsive customer service, and loyalty programs like Amazon Prime.

5. Revenue Streams

Introduction:

Revenue Streams represent the ways a business earns money from each customer segment. This includes sales, subscriptions, rentals, licensing, or advertising.

Example:

Spotify earns revenue from two main streams: premium subscriptions and advertising on free user accounts.

6. Key Resources

Introduction:

Key Resources are the critical assets needed to deliver the value proposition — such as employees, technology, capital, and intellectual property.

Example:

Tesla's key resources include its battery technology, manufacturing facilities, and skilled engineers.

7. Key Activities

These are the main actions a business must perform to operate successfully — such as production, marketing, platform management, or customer service.

Example:

8. Key Partnerships

Key Partnerships refer to the external companies, suppliers, or organizations that help a business achieve its goals or deliver value.
